

Meeting your business needs

Sage 200 has been designed specifically for mid-sized businesses in all sectors of industry that have complex business process requirements.

The philosophy behind Sage 200 is to provide you with the means to implement integrated business processes that are flexible enough to match the way you work. The concept is simple, Sage 200 provides our customers with a platform to build integrated software for every part of their business.

As a developing business, you're probably already using a number of different software packages to automate many of your key business processes. However, is your current accounts and trading system supporting your growth, or is it holding you back?

We know that with growth comes complexity. You might be taking on new customers and suppliers and need a system that can cope with an increased volume of transactions.

You might have an expanding accounts department and need to give additional users access to your system. Or you might be starting to move into overseas markets and need a system that can handle multiple currencies.

Sage 200 is made up of powerful business modules, which are designed to work together to help your operation run more smoothly. Sage 200 combines ease of learning and use with high productivity. From core financials to supply chain and integration with Sage Micropay Professional, CRM and industry specific solutions, Sage 200 offers you vital business control.
