SOLUTIONS

Always Innovative...

Goods In - All goods received at your premises must first be manually recorded at the receiving area. The quantities must then be re-entered into the computer system to keep stock levels accurate and update purchase order processing.

Goods In UtopiaMSM - All purchase orders are displayed on the handheld device. Expected quantities are clearly displayed and incoming stock can be scanned and received quantities quickly entered. The purchase orders are updated and the stock adjustments are automatic.

Enter quantities received

Sales

Orders are manually written on order sheets and later entered into the computer system for invoicing and stock adjustment. This paper system is extremely time consuming and further discrepancies can occur when the data is being re-entered into the accounting system.

Simple and efficient stock management

- More accurate and up to date stock levels
- Less paperwork
- Increased productivity
- Reduced overheads
- Time saving for staff

Sales UtopiaMSM

Items can be scanned to quickly create orders on the handheld PC. This reduces the time taken to build a customer order and results in accurate and up to date stock levels. The orders are automatically placed into the accounting system. Customer signature can be captured at the time of order.

An easy to use interface allows you to manage stock in an efficient and flexible manner from any location

Stock Control

A stock take which is usually done on a weekly or monthly basis involves manually recording the results of a stock count, possibly numerous times. This paper based system is extremely time consuming and further discrepancies can occur when the data is being entered into the computer system.

Stock Control UtopiaMSM

Stock levels can be checked at any time and new stock counts can be entered. For stock counting, an item is scanned and the quantity on the shelf is entered into the handheld device. When the stock count is complete the results can then be viewed on a computer and then adjusted/approved before being transferred into the accounting/stock control software.
